Accordent Capture Station  
*Version 2.0*

### Accordent Capture Station

---

Create synchronized rich media presentations for online communications and eLearning.

Expanding upon its award-winning suite of webcast presentation products, Accordent introduces Capture Station, the first hardware solution to combine the ease and portability of a capture appliance with the scalability, searchability, and flexibility of traditional webcast presentations.

Offered as a fully integrated system, the Accordent Capture Station seamlessly records and synchronizes audio, video and data output from any presentation device (notebook PC, document camera, smart board, etc.) and instantly turns it into an online rich media presentation.

Powerful, yet easy to use, the Accordent Capture Station is a great way to extend your online communication capabilities.

## UNSURPASSED EASE OF USE

---

Simply connect your video camera and PC (or other content device) to Capture Station and you are ready to capture your presentation for live broadcast or on demand viewing. Just present your information normally and Capture Station will do the rest, including capturing audio and video content and all of the visual information shown on your PC. When you are done, the Capture Station has saved a copy of your presentation that can be edited and made searchable within a content management system.

## CAPTURE AND SYNCHRONIZE CONTENT

---

The Accordent Capture Station can synchronize and publish any visual image, including:

- All files shared or projected on-screen during a presentation
- All images captured via a document camera or smart board
- All files shared during a video conference
- All images from a RGB/VGA output

## SUPPORT FOR LEADING VIDEO CODECS

---

Presenters can publish live using Real Media and Windows Media and then publish on demand in multiple bit rates. The MPEG-4 codec is also available for live or on demand publishing with an integrated solution featuring *Vbrick's EtherneTV*.

## ONE-CLICK LIVE BROADCASTS

---

The Capture Station is designed to bring a presentation beyond the walls of a classroom or conference room with the click of a button. Simply select a customizable interface, add optional descriptive information about the presentation – such as speaker name, content description and date – and click Start. It's that easy.

## AUTOMATIC PUBLISHING TO THIRD PARTY LEARNING MANAGEMENT SYSTEMS

---

Publish directly to third party content and learning management systems, including Blackboard, to fully leverage the value of your content.

## AUTOMATE AND REMOTELY MANAGE THE PRESENTATION CAPTURE PROCESS

---

Administrators can schedule the Capture Station to automatically start and stop the capture process at predetermined intervals with the Accordent Event Scheduling & Notification Module. Integration with leading room control and automation products from AMX™ and Crestron™ allow users to control the capture process from touch screen control panels.

## PRESENTATION EDITING

---

The Capture Station also allows a presenter to edit their live presentation before publishing it on demand. These optional editing features include: adding or removing images, changing the timing of synchronized images, and adding, removing or editing chapter timings within the presentation.

## EXTEND PRESENTATION VALUE

---

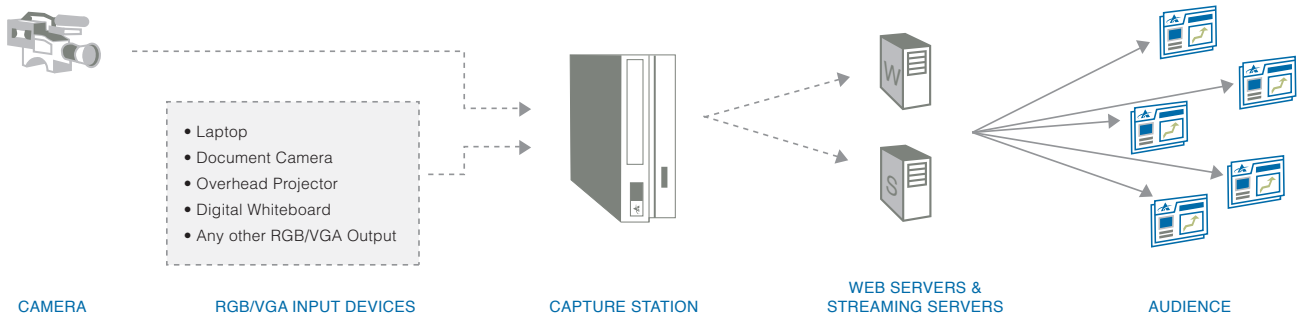

Once a presentation has been created, it can be automatically published to a custom content portal using Accordent's Content Management & Search Module. Within the portal, viewers can access content directly or leverage sophisticated search technology to quickly and efficiently locate relevant information. Search queries may include: presenter names and titles, content descriptions and dates.

## ADDITIONAL CAPABILITIES

---

- Create and/or customize templates to promote unique branding and messaging
- Synchronize assets at presenter-selected fixed intervals or utilize manual synchronization to maximize presentation quality while minimizing bandwidth consumption.
- Optional three-year onsite warranty ensures that hardware will be fixed or replaced at no additional cost.
- Utilize the Capture Station's built-in A/V encoder or employ third-party remote A/V encoders.
- Automatically publish your presentation to CD or DVD.

## SYSTEM DIAGRAM

## CAPTURE STATION SYSTEM INFORMATION

### CAPTURE STATION SPECS\*

- Intel 2.8 GHZ Dual Core Processor
- 512 MB RAM
- 80 Gigabyte Hard Drive
- DVD-Rom/CD-RW
- Audio/Video Card
- RGB Capture Card

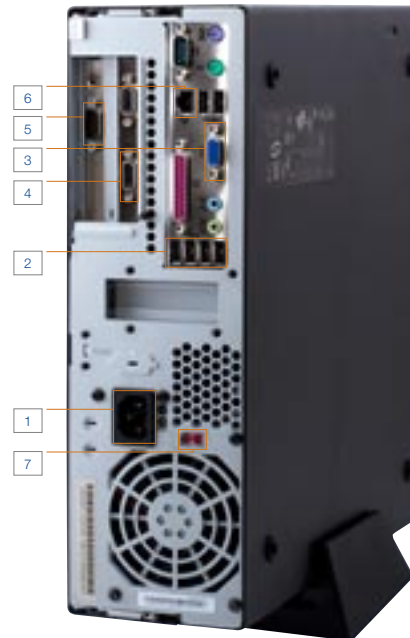

### END USER REQUIREMENTS

- Real Media Player 9 or 10
- Windows Media Player 9 or 10
- Internet Explorer
- No proprietary plug-ins

### SYSTEM DIMENSIONS

- Height: 4.2 in.
- Width: 13.8 in
- Depth: 15.2 in
- Weight: ~ 19 lbs

- 1 Power Cord (Provided)
- 2 USB Mouse and Keyboard (Provided)
- 3 Monitor
- 4 RGB/VGA Device
- 5 Audio/Video Breakout Cable (Provided)
- 6 Internet
- 7 WARNING: Please confirm that you have the appropriate power setting (115 or 230) for your geographic region.
